

## Screening of cement

**Product group:** Parts conveyor

**Industrial process:** screening, classifying, dewatering

**Industry:** Construction, Quarries, Pits, Mining, Cement

**Type of drive:** parts conveyor drive

**capacity (t/h):** - | **bulk:** Cement | **density (t/m<sup>3</sup>):** - | **grain size (mm):** -

**function:**

Screening of cement with splitting at (width) 40 $\mu$  with a output of 60kgs/h. For easy cleaning, the screen moduls can be taken out to the side.

**solution:**

Screen on basis of a part conveyor feeder in modular design. Enables a fast change of the screen moduls. To avoid block of the screen, a cleaning system by means of rubber balls has been installed directly below the screen. To avoid caking of the smaller particles below the screen, a filter has been installed as the bottom plate. Using compressed air, the particles can be removed and will be brought out of the machine.  
(VSRD-400-1/TFH400-L-S50 (#50645))

**usability:**

- Compact and versatile screening machine for fast change of the screen moduls.
- Target product: fine bulk material
- Used at: Quality control production

**place of installation:** Germany
